Hi

Sounds like a great plan. I will have the materials prepared by June 10th.

Thanks

Carol

Hi Carol

I discussed this with David. Here is the plan for the CARC meeting
You will prepare a "briefing document" summarizing the available Epi studies and providing your "conclusions" of these studies. In that document, you will also bring in the IARC's review, discussion, conclusion and their rationale.
You will also have the publications (articles) as your background materials
You will submit these to Chris Schlosser (Ex.Sec) on June 10th.
The second half of the "briefing document" will have the animal evidence. Which will be prepared by me/Anwar Dunbar
The members will receive this document along with the DERs and the epi.lit.articles for their review on the 11th. (2 weeks prior to the meeting)

Subject matter expertise from the agency can participate in CARC meeting to provide their expertise, so go ahead and invite Mr. Lobdel. He can be in person, or we can "pipe-in" him, as we do with our pathologist from RTP.

If you have Q's pl. stop by or catch me when you see me running around like a mad man!!

Regards

JR

Jess Rowland,
Deputy Director
Health Effects Division
703-308-2719

Subject: FW: Glyphosate CARC Meeting

When: Wednesday, June 24, 2015 10:30 AM-12:30 PM (UTC-05:00) Eastern Time (US & Canada).

Where: DCRoomPYS10100/Potomac-Yard-One

Does the CARC want a brief review of the epi material the HIT compiled for glyphosate at this meeting?

I think it would be a great idea, and a great step forward for our program just to hold the conversation as to the integration of the human and animal databases regarding the carcinogenicity of glyphosate, regardless of the outcome of the CARC meeting.

One week prior to the glyphosate CARC date, Anna Lowit and I are holding a Tox training of the OPP draft WOE human-animal integration "Framework" which has been implemented in several cancer and non-cancer chemical cases in the division. This is timely for the glyphosate CARC as well.

Additionally, I could elicit the participation of another EPA epidemiologist (D. Lobdell, a research epidemiologist at NHEERL) to provide another perspective on the data and its use in scientific decision making (NHEERL cannot advise on science policy).

Let me know, I would be happy to prepare whatever materials the CARC desires to inform this conversation.

Thanks,

Carol
